

FOR IMMEDIATE RELEASE

STUART, FLA., Monday, August 3, 2026. Carolina Filters, Inc. announced the launch of Florida Air & Filtration, a new Carolina Filters company serving the Florida market. Florida Air & Filtration brings a full line of indoor air quality services -- including turnkey filter service, coil cleaning, duct cleaning, and fire and smoke damper inspection and repair - to facilities across the state, built around the same compliance-driven programs used across the Carolina Filters family. The company builds on Carolina Filters' long-standing history of filter distribution in Florida, formalizing that presence into a dedicated, locally based supply and service operation.

Florida Air & Filtration delivers a full line of indoor air quality and facility compliance services using the programs developed through Carolina IAQ, another company within the Carolina Filters family. Core services include:

- Turnkey filter service and program management
- Filter supply chain and distribution solutions for facility teams and mechanical contractors
- Coil cleaning and restoration
- Duct cleaning
- NFPA 80 and NFPA 105 compliant fire and smoke damper inspection, certification, and repair

These services draw on more than 55 years of indoor air quality expertise across the Carolina Filters family of companies, including Carolina IAQ's 100,000-plus certified damper inspections to date. Florida Air & Filtration serves facilities across Florida, including healthcare, education, industrial and manufacturing, data center, hospitality, and commercial properties, working directly with facility teams and through mechanical contractor partners, a channel central to meeting Florida's coastal and humidity-driven maintenance needs. Compliance remains a core part of that work, particularly for healthcare facilities managing the requirements of the AHCA Life Safety Code and Joint Commission EC.02.05.01.

"We've been supplying Florida facilities for years. Now we're putting our people on the ground here full-time. Stuart gives us a base to grow from, and we intend to build the same reputation for clean air and reliable service that Carolina Filters has spent 55 years earning. For the people who run these buildings every day, that means a partner who's already invested in their success."

Mike Russell, VP, Commercial Strategy & Development, Carolina Filters, Inc.

For current customers of Carolina Filter Supply, Carolina IAQ, and Carolina PEC - many of whom Carolina Filters has already served through years of filter distribution into the state, Florida Air & Filtration extends the same standardized programs and single-vendor accountability into a new region, with local support based in Stuart. For facilities and contractors new to Carolina Filters, Florida Air & Filtration offers a direct path to full-service filtration, cleaning, and compliance-ready inspection programs, documentation, and reporting.

Florida Air & Filtration operates as a Carolina Filters company. Service areas, program details, and scheduling are available now at floridafilters.com.

About Carolina Filters, Inc.

Carolina Filters, Inc. serves facilities nationwide through three specialized divisions, plus Florida Air & Filtration, a Carolina Filters company serving the Florida market. Florida Air & Filtration offers turnkey filter service, coil cleaning, duct cleaning, and fire damper inspection and repair, backed by the compliance programs used across the Carolina Filters family.
